

QA Automation PR Review Checklist

1. Code Quality - Follows framework structure - Proper naming conventions - No hard-coded values - Reusable methods 2. Test Coverage - Positive and negative scenarios - Edge cases covered - Validation assertions added 3. Stability - Proper waits used - No flaky locators - Uses retries or test isolation 4. Performance - Avoids unnecessary waits - Efficient selectors 5. Reporting & Logging - Screenshots on failure - Logs added where needed 6. CI Compatibility - Tests run in headless mode - No local dependencies 7. Security - Secrets not committed - Tokens handled securely 8. Documentation - README updated - Test comments added
